Kalahari Resorts

Scott Brown

Q- Do the "arms" of the spider looking permit boundary for utilities need to be included within the managed area calculation? A- Since they are going to be restored, they do not need to be a part of the management area. Make sure that the area removed is documented on the forms for clarity.

Q – If the permit boundary was increased to include the gravel road between the Kalahari property and Swiftwater Creek, would that area need to be included in the management area. They are being told to include it because they have a project in mind that would not be part of this application. A- need to discuss it further in the office and I will get back to him.

Q- The site discharge points do not discharge directly to surface waters of the commonwealth. Is an easement needed for these discharges. A- It is incumbent upon the property owners to work out an easement. We do not review the easement.
